

Primary Care Webinar - Bisphosphonates in primary care: starting, reviewing and stopping

Topic Bisphosphonates in primary care: starting, reviewing and stopping

Speakers: Dr John Edwards and Dr Zoe Paskins.
Content development supported by Dr Lizzie Cottrell.

Watch the webinar

In this interactive webinar, the GP and rheumatologist presenters, acknowledging the multiplicity of guidance on osteoporosis management, presented a pragmatic approach to risk assessment, treatment initiation, patient reviews, and drug 'holidays' or cessation. A reference flowchart and potential targets for audit was also provided.

Key topics included:

- Fracture Risk Assessment - who needs one and what tools are available to undertake the assessment?
- Translating the results of the Fracture Risk Assessment into patient treatment recommendations
- The review process - when should patients treated with bisphosphonates in primary care and when is it appropriate to advise treatment breaks or treatment cessation?
